Printing Tips

These pages are designed to be printed on standard 8½x11 paper.

For large-print: print one page per sheet.

For regular-print: print two pages per sheet in landscape mode.

For more information, follow the instructions after selecting Print in Adobe Reader.

Introduction

How to Solve

Simply fill in the empty squares so that every row, column, and 3x3 section contain the numbers 1 through 9 with no repeats. A Sudoku puzzle will have only one possible solution.

For example, here is a solved Sudoku puzzle:

2	5	3	9	7	4	1	8	6
6	1	4	5	3	8	7	9	2
9	7	8	2	1	6	5	3	4
3	4	7	8	9	1	6	2	5
5	9	2	7	6	3	8	4	1
8	6	1	4	5	2	3	7	9
7	3	5	1	2	9	4	6	8
4	2	6	3	8	5	9	1	7
1	8	9	6	4	7	2	5	3

As you can see, all nine rows, nine columns and nine 3x3 sections contain the numbers 1 through 9.

Solving Techniques

Only Possible Squares

Look for squares that are the *only* place in a row, column or 3x3 section that can have a particular number. That number must go in that square, so write it in! In the example puzzle, the square in the second row with the question mark is a 5 because that is the only possible square in that row that is allowed to have a 5.

Only Possible Numbers

Look for squares that can have only *one* possible number. That number must go in that square, so write it in! In the example puzzle, the square in the sixth row with the exclamation mark is an 8 because that is the only possible number allowed in that square.

Don't Guess!

Be sure you have the correct number for a square before you write it in. Once you make a mistake it can be very hard to undo the damage later!

2	5			7			8	6
			?		8	7		
					6	5

	9						4	
!	6			5			7	9
		5	1					
		6	3					
1	8			4			5	3

Example Puzzle

Candidate Numbers

For the *Hard Puzzles* section of this book it can be helpful to write all of the possible candidate numbers into each square in small print. Then use this information and logic to remove all but one candidate number for a square.
